Education

Colegio de Montalban

September 2022 – May 2026

Bachelor of Science in Computer Engineering

GWA: 1.5/1.0

Thesis: Develop a solar-powered IoT flood prediction system. Using fuzzy logic for accurate forecasting and integrating data from LiDAR sensor, a tipping bucket, and the PAGASA API, delivering critical real-time alerts through a dedicated web portal for the MDRRMO and an automated public Facebook page.

Experience

Intouch CX

UPTC Diliman, Quezon City

IT Desktop Engineer Intern

June 2025 – September 2025

- Managed and supported IT infrastructure projects, including re-imaging and deploying Windows workstations through Windows Deployment Services (WDS), configuring network settings and DHCP-related tasks, performing system diagnostics, and upgrading production floor systems to Windows 11.
- Resolved IT support tickets and managed the complete hardware lifecycle, including provisioning new devices, asset inventory tracking, deployment, maintenance, and secure recycling of decommissioned equipment.
- Utilized Windows command-line and administrative tools such as ipconfig, ping, sfc, chkdsk, gpupdate, DISM, netstat, wmic, sysdm.cpl, and appwiz.cpl for troubleshooting, diagnostics, system maintenance, and network-related support.
- Assisted in LAN cable setup, router and switch configuration, VPN setup for agents, installation of account-specific applications, and troubleshooting network connectivity, login issues, driver conflicts, printers, webcams, and authentication devices through both remote and on-site support.

Codebility

Remote

Automation Specialist and Developer Intern

September 2025 – December 2025

- Contributed in core product development by designing, building, and integrating full-stack features for AI-powered web applications (e.g., Paw Med AI, Aeprivia), delivering production-ready code across multiple environments while maintaining a consistent user experience.
- Developed and integrated full-cycle automation workflows using n8n and AI models to process client data, automatically updating the Odoo CRM. This resulted in a 40% reduction in manual data entry and a 15-hour decrease in client-to-CRM processing time.
- Designed UI/UX in Figma, contributed to web development, and created social media marketing content in Canva to enhance the organization's digital presence, engagement, and reach.

Technical Projects:

- **3x Hackathon Finalist Projects (Aptique, Aura Guard, and Vanitrack)** – Developed innovative solutions including an IoT-enabled tenant management platform with automated QR billing, a RAG-powered voice assistant for BPO compliance and agent protection, and a smart meal ordering platform that streamlined Sunshine Act compliance and expense reporting workflows.
- **JuanWork** – Developed a merit-based home-repair hiring platform on Facebook Messenger, with mandatory KYC (via n8n and a dedicated website) and a trust-ladder accountability system at Developers Camp Manila
- **Tiny8086 (8-Bit Emulator)** – Engineered an 8-bit microprocessor emulator using two ESP32s inspired by the Intel 8086 architecture, demonstrating instruction execution, memory handling, and low-level hardware integration including an LCD, a buzzer, LEDs, and a 4x4 matrix button through embedded C++ development.
- **IoT-Enabled Smart Greenhouse System** – Developed an IoT-based automation system using ESP32, sensors, and controllers to monitor and regulate temperature, humidity, soil moisture, and lighting for efficient plant care
- **I-VoteNow** – Designed a secure and user-friendly online voting PHP web app that streamlined digital election workflows while improving transparency, accessibility, and vote management for organizations
- **Safe Payroll** – Developed a modern payroll system (VB.NET Windows Application Form) to streamline complex payroll calculations and employee record management, providing HR managers with a user-friendly interface for quick data entry and maintenance.

Tech Stack: JS, HTML, CSS, Git, n8n, Linux, Powershell, ESP32, Arduino, Python, Bash, Supabase

Certifications: Linux System Administration - LFS10; GitHub Foundations Certification; IBM IT Fundamentals

Hackathon Competitions: Inventi Challenge, Alibaba Cloud Philippines, Vanigent Procure-a-Thon, Developers Camp
